raygister

PRESS KIT / EN

From construction scope to shared decisions.

Raygister helps architects and construction project managers prepare project specifications, invite contractor bids and compare the resulting offers.

A shared scope of work

Drawings, technical notes, spreadsheets and quotes often describe the same project in different ways. Raygister brings this information together in a scope organised by trade package and line item. That common structure supports estimating, tendering and explaining choices to the client.

An AI assistant helps structure documents and propose quantities and prices. The professional reviews, adjusts and validates the scope before inviting bids. Contractors' responses can then be compared line by line.

Three roles working on one project

The architect or project manager prepares and coordinates the tender. Contractors price the requested work. The project owner receives information to understand differences between bids and make decisions.

Focus: private construction projects in France

Raygister addresses architecture practices, interior architects and independent project managers, including those working on renovation, fit-out and extension projects. This English-language kit describes the French offering for an international readership.

Based on the Home, DPGF and About pages reviewed on 18 November 2026.

PRODUCT / THE WORKFLOW

One common scope. Four connected stages.

01 / Specify and estimate

Starting with drawings, technical notes, photographs, quotes or a project description, the assistant helps organise trade packages, work items, locations, quantities and prices. Professionals can reuse their catalogue and edit each line. Pricing schedules and technical specifications are prepared from the structured scope.

02 / Invite and compare bids

The project manager sends the scope to contractors, who can respond online with or without a Raygister account. Bids are compared against a shared structure. Quotes received outside the platform can also be brought into the comparison after their line items have been read and matched.

03 / Explain the options

The project manager builds contractor selection scenarios, package by package, to present to the client. Price differences, alternative proposals and scope differences become explicit points for discussion rather than a comparison of headline totals alone.

04 / Award and retain the record

The website presents contract management, electronic signing, contract changes and related documents within the same environment. Project history helps users retrieve earlier versions and exchanges.

AI assistance with professional review

AI-generated estimates require checking. Quantities, prices and technical specifications must be reviewed and adapted to the project. Raygister supports preparation and comparison; professional users remain responsible for validation and decisions.

Features described on the public website as of 18 November 2026. This overview is not a performance guarantee or technical certification.

COMPANY / BACKGROUND

Making the handoff to construction clearer.

Raygister’s stated mission starts with a practical problem: moving from design to construction can create misunderstandings, additional costs and delays. The platform aims to make that transition clearer by bringing project participants together around structured specifications.

Based in Lille, France

Raygister states that it is incubated at EuraTechnologies in its AI/Data programme. Its registered office is at 165 avenue de Bretagne, 59000 Lille. The service is operated by QUOTIA under the Raygister trading name.

Sylvain Garin

Sylvain Garin is a cofounder of Raygister and managing director of QUOTIA, the company operating the platform. His public statement emphasises AI as a way to give construction professionals more time for their work.

Two published milestones

15 December 2025: a company article announces Raygister’s incubation at EuraTechnologies.
19 January 2026: a company article announces that the VIP beta has passed 100 registrations. This is a historical registration milestone, not a current paying-customer count.

Company details

Operator: QUOTIA, a French simplified joint-stock company (SAS).
Registered office: 165 avenue de Bretagne, 59000 Lille, France.
Company register: Lille Métropole 102 497 377.
Website: www.raygister.com.

Dates above refer to the publication of the articles.

MEDIA / QUESTIONS AND STORY ANGLES

Understanding Raygister.

Who is the product for?

In France, Raygister targets architects, interior architects and project managers working on private construction projects. Invited contractors and clients participate according to their project roles.

How does it differ from quoting software?

The starting point is a project’s scope and a tender involving several contractors. Raygister focuses on comparable bids, informed selection and the subsequent formalisation of construction contracts.

Do contractors need an account?

The website states that contractors can respond with or without an account. Registration and responses are free; a commission applies to contracts won. Observed pricing is included in the dated fact sheet.

How should French terms be understood?

Maître d’œuvre: the architect or professional responsible for design and project coordination, depending on the appointment. Maître d’ouvrage: the project owner or commissioning client. DPGF: a breakdown of a lump-sum contract price. CCTP: project-specific technical specifications. DCE: the tender document package. These are functional explanations, not exact legal equivalents across countries.

Three potential story angles

- Comparing contractor quotes that describe different scopes of work.
- Keeping professional review central to AI-assisted estimating.
- Making contractor selection easier for project owners to understand.
