Introducing Raygister.

One sentence

Raygister helps architects and project managers structure construction specifications, invite contractor bids and compare offers on a common basis.

Short introduction

Raygister is a collaborative platform for private construction projects in France. It helps architects and project managers prepare specifications, estimate costs, invite bids and compare contractors' offers. Its AI assistant helps structure project documents, with review and validation by the professional user.

About Raygister

Raygister is a collaborative platform for architects and project managers working on private construction projects in France. Starting from documents or a project description, its AI assistant helps organise trade packages, work items, quantities and prices. The professional reviews and adjusts the scope before inviting contractors to bid. Offers can then be compared on a common basis, helping explain differences to the client and support contractor selection. The platform also presents construction contract management, electronic signing and contract change features. Operated by QUOTIA and based in Lille, Raygister is incubated at EuraTechnologies in its AI/Data programme.

Sylvain Garin / Short biography

Sylvain Garin is a cofounder of Raygister and managing director of QUOTIA, the company operating the platform. His public statements describe an approach to AI that supports construction professionals, with a focus on project preparation and collaboration.

François Mille / Short biography

François Mille is a cofounder of Raygister and director of Cotrel Studio. His work at the studio covers project budgets and contracts, administrative and commercial coordination, stakeholder relationships and construction-site follow-up.
